

LEMO Maschinenbau GmbH

## Drag chain cables from TKD successfully in use

### Introduction

LEMO Maschinenbau GmbH offers packaging solutions with a high technological standard, precision and durability for the fields of hygiene, medicine and healthcare, food and beverages, logistics and security, industrial packaging and disposal as well as carrier bags.

### Challenge

For use on the so-called gripper trolley, LEMO requires cable solutions that can withstand the high dynamics and cycles while remaining highly efficient at all times.

### Solution

Together we have selected our drag chain suitable control cable KAWEFLEX® 6130 SK-PUR UL/CSA. Due to the technical requirements as well as the small bending radius of  $7.5 \times d$ , the cable was fully convincing.

## Our benefits

### On-site consultation

We provide advice where it is needed - directly at the application.

### Build connections

Whether highly dynamic applications in drag chains, robotic applications or fixed cables - we fulfill your individual requirements in machine and plant engineering.

### Customized solutions

You can't find the right cable in our portfolio?

We develop and design exactly the right cables or systems for your individual applications.

"We look back on many years of good partnership. The honest advice, fast delivery and good cost-performance ratio for the drag chains are only some of the advantages."
